

Onalenna Molehabangwe

Software Engineering Graduate | Machine Learning and AI enthusiast

Career Profile

BSc Information Technology graduate specialising in Software Engineering, with a 77% academic average and a strong foundation in software development, data analysis and artificial intelligence. Ambitious and eager to kick-start my career in technology, applying my technical skills to real-world problems while continuing to grow as a developer. Particularly interested in software engineering, AI/ML and data-driven applications.

Education

BSc Information Technology — Software Engineering

Eduvos, Pretoria | 2023–2026

Academic Average: 77%

Technical Skills

- **Languages:** Python, Java, SQL
- **Libraries & Frameworks:** Scikit-learn, NumPy, Pandas, Streamlit
- **Software Engineering:** Object-Oriented Programming, Software & Architectural Design, Software Testing & Quality Management, Version Control
- **Methodologies:** Agile, Scrum
- **Tools:** GitHub, VS Code, Eclipse, Jupyter Notebook

Technical Projects

Premier League Match Predictor

PYTHON | PANDAS | SCKIT-LEARN | SREAMLIT | REST API

- Designed and built an intelligent application to predict sports outcomes using historical datasets and custom engineered team-performance features.
- Engineered an end-to-end data pipeline to clean, process, and extract key metrics including team win rates, goals scored, and recent form trends.
- Trained machine learning models using scikit-learn and integrated a REST API to display live match schedules and standings on an interactive Streamlit dashboard.

AI Breast Cancer Classifier (Collaborative Team Project)

JAVA | EVOLUTIONARY COMPUTING | DATA PREPROCESSING | GITHUB

- Engineered two distinct Genetic Programming (GP) classification models from scratch in Java to predict breast cancer recurrence using clinical datasets.
- Developed a custom data loader class implementing min-max scaling to clean, normalize, and handle imbalanced distributions across clinical feature inputs.
- Implemented complex mathematical evolution logic (Arithmetic GP operators) and conditional logic (Logical GP decision trees) to model non-linear feature interactions.
- Executed a rigorous 30-run seeded testing procedure, recording metrics across training accuracy, F-measure, and runtime, followed by a two-tailed paired t-test for statistical significance.

Gym Buddy App (Collaborative Team Project)

JAVA | ANDROID STUDIO | FIREBASE FIRESTORE | AGILE/SCRUM

- Partnered effectively within a high-performance 6-member team utilizing Agile/Scrum methodologies to deliver a full-stack mobile application.
- Took ownership of the core backend application logic in Java and integrated Firebase Firestore for cloud-based data storage and real-time retrieval
